

Lab 1 — Semantic HTML Scaffold

Student Submission

This completion PDF documents the semantic HTML5 scaffold created for a generic e-commerce homepage.

Implemented Requirements

- Semantic header with navigation
- Navigation containing four links
- Main element containing three sections: Featured Products, Categories, and Newsletter Signup
- Footer containing three link columns
- Accessible labels and semantic article/list elements
- No CSS styling included, as required

W3C Validation

The W3C Validator result screenshot should be placed below after validating index.html at validator.w3.org.

Note: A genuine W3C validation screenshot cannot be fabricated. Validate the supplied index.html and insert the clean-result screenshot here.
